GemVCare™, your expert in diabetes management.

Advanced genetic testing allows you to have better understanding of your health condition as well as the prevention or treatment of diabetes. Via the easy-to-use mobile platform, you, your family, your friends, and also your medical team can participate in managing your health together and also share the joy of the treatment outcome!

General Disclaimer:

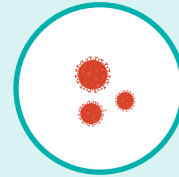

Gemomic™ Technology is a patented technology adopted by GemVCare Ltd. ("GemVCare") to assess the risks of diabetes and its complications.

As the causes of diabetes and its complications are complex, all related tests require professional interpretation. The Gemomic™ Technology and any other GemVCare services (collectively "Services") shall be used for reference purpose only and not as a substitute for professional medical diagnosis or advice. Users are reminded to seek professional advice and shall rely or make decisions based on the Service at their own risk.

Neither the author(s) of the reports published for the Services nor GemVCare (including its shareholders, directors, employees and consultants) are liable or have any duty of care for any decisions and/or consequences in relation to the results from the Services.

The Services is governed, and GemVCare's liability is limited, by separate terms and conditions to this General Disclaimer forms part. All rights in relation to the Service and any publication in relation thereto is fully reserved by GemVCare.

★ HEALTHY! IT'S EASY!

Our **DProtect™** test is **simple and safe**. Only trace amount of your buccal cells or blood (1-2mL) is needed.

Sample will be sent directly to our testing centre for **genetic testing**.

Report will be explained by your health care provider after several working days. You may update your report periodically afterwards.

Genetic test **result is lifelong**. Genes that are tested will not need to be tested again in the future.

AM I SUITABLE FOR THE TEST?

DProtect™ is suitable for the following diabetes patients:

-  Have not had any complications yet;
-  Have early stage of cardiovascular or kidney complications;
-  Have complications other than cardiovascular or kidney diseases

If you do not have diabetes, you or your family members may also choose another genetic test **DForesee™** that is specifically designed for predicting diabetes.

Diabetes-related genetic testing is based on the current result of the research done on Chinese and Asians which have lasted for over 20 years on more than 10,000 real cases verified. However, due to racial differences, it may not be applicable to non-Asians.

UNDERSTANDING YOUR GENES

Key To Control Diabetes

DProtect™

DIABETIC COMPLICATIONS CAN BE FATAL!

DIABETES is a chronic disease of which around **30%** of the patients will develop complications within 5 years.

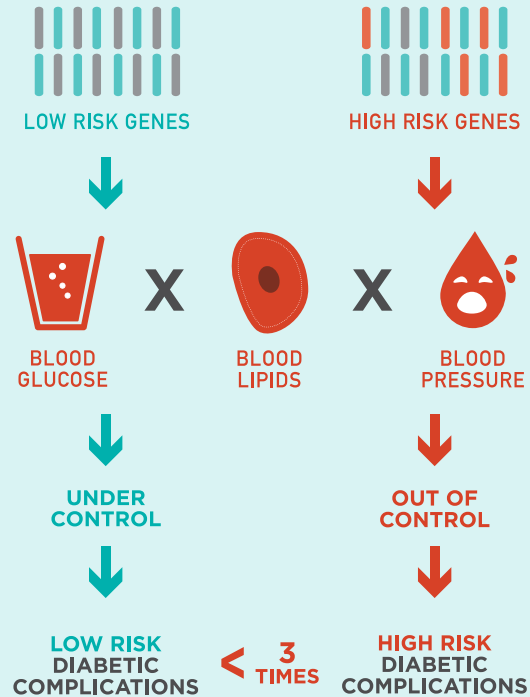

SERIOUS DIABETIC COMPLICATIONS can result in heart failure, kidney failure, blindness, limb amputation or even death.

TOP 10 KILLER DISEASES in HK

GENETICS MAY INCREASE RISK OF COMPLICATIONS

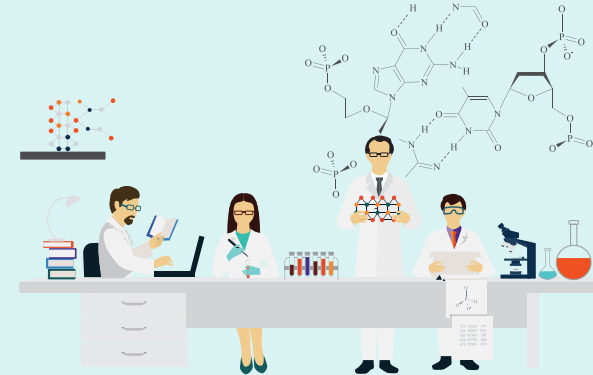

To develop diabetic complications, apart from high risk factors such as hypertension, high blood lipids and high blood glucose level, genetic material also plays an important role.

Research has found that in people having hypertension, high blood lipids and high blood glucose, if they have inherited high-risk genes at the same time, their risk of developing complications may be **up to 3 times** more than people having standard levels of the above parameters and having low-risk genes.

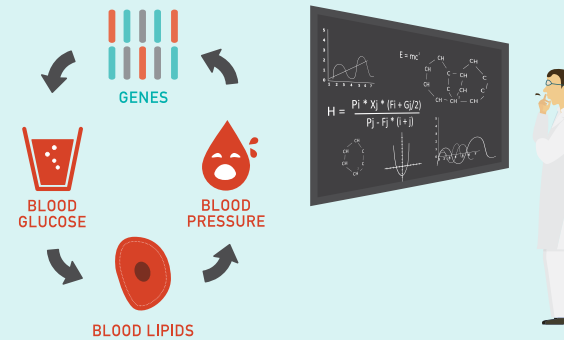

Reference: Zhang JG et al. 9th IDF-WPR and 4th AASD. 2012

AM I AT HIGH RISK?

GemVCare utilizes University-patented technology to assess your own genes.

Together with your current health condition, **calculate** your **risk index** of developing **diabetic complications** (cardiovascular disease and kidney disease).

ANALYSIS OF TEST RESULTS

TEST PROVIDES

Genetic test results for diabetes and its complications

ASSOCIATED MEANING

How your gene is related to the development of diabetes and its complications

If you possess a high-risk gene of developing diabetes, your family members may also have inherited the relevant gene

TEST PROVIDES

Combining genes and other risk factors to analyze your probability of having diabetic complications within 5 years

TEST PROVIDES

Update your risk index

ASSOCIATED MEANING

Is my risk of having diabetes relatively higher than the others

Your healthcare team will work out an appropriate strategy to manage and treat your disease according to your risk index.

ASSOCIATED MEANING

You will have a target to get involved in managing your own health

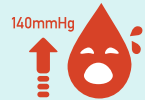

TEST PROVIDES

Impact on your risk of having complications if the number of parameters (diabetic complications control) that are up to standard changes in future (up to 75 years old)

ASSOCIATED MEANING

Through improving risk factors, thereby lowering the risk of developing complications

140mmHg
